

Small-Scale E-commerce Website

Full-Stack Web Development Project

Software Development Management Lab – 0613-307

Abstract & Introduction

What is E-commerce?

E-commerce enables buying and selling of goods and services online — a cornerstone of modern digital commerce.

Project Overview

This project aims to develop a small-scale e-commerce website that allows users to browse products, add items to a cart, and place orders online. The system will provide a simple and user-friendly interface for customers and an admin panel for managing products and orders. The website will be built using modern web technologies such as HTML, CSS, JS, React, Node.js, and a SQL database. The goal is to create a functional online shopping platform that demonstrates real-world web development skills including frontend design, backend development, and database management.

Project Objectives

Technologies Used

Platform Features

User Features

- Register & secure login
- Browse & search products
- Add/remove items from cart
- Checkout & order history

Admin Features

- Add, edit & delete products
- Manage customer orders
- View & manage user accounts
- Dashboard analytics overview

Project Scope

✗ Excluded

- Real payment gateway integration
- Advanced recommendation engine
- Multi-vendor support
- Mobile app version

Project Timeline & Expected Outcomes

Expected Outcomes

- Fully functional e-commerce website
- Responsive, mobile-ready design
- Integrated MySQL database
- Operational admin control system

Budget Considerations

- Cloud hosting (AWS / DigitalOcean)
- Domain registration

Budget & Limitations

Budget

- 1 Domain
- 2 Hosting

Known Limitations

- 1 Limited scalability for high-traffic scenarios
- 2 Basic security — no advanced threat protection
- 3 No real payment gateway integration

Conclusion:

This project will help in understanding full-stack web development by integrating frontend, backend, and database systems. It will serve as a practical example of building a real-world application.
